Grocery Price Checker

- Project Scope and Website Specifications
  - Introduction
    - This is a website to compare prices of different products. It is an MVP and still has a lot of development to become a finished product, but the potential for a profitable business idea is here.
  - Purpose
    - The problem that people run into every time they go grocery shopping is that they would like the best prices on items. This website and future application will allow people to see the price of different products from different stores before they leave their home. This will allow them to go to the store and shop at a price that they think is right for them.
