The Problem

- We figured out a problem that people run into every time they want to grocery stop but also want to get the best prices on items. So we came and fixed it.

The Solution

- This app is the solution to everybody's problem who grocery shops and also wants the most for their $$$.
- This app fixed the problem to before you even leave the house you know which grocery store has what for the prices you want.

Design Process

- The tools we used for this project were Figma and Trello.
- Trello was used for the actual planning & assignments for each.
- Figma was used for the mock up of the site.

Research

- We use google analytics to find food items.
- We also used google to cross reference store prices.

Demo

https://www.figma.com/file/SWK8X3Bd6LKAN2DXSBuBe9/Munni?node-id=1%3A2

Future Development

We have some ideas we want to implement in the future which are:

- The ability to scan items in store
- Have list of recipes created through an ingredient generator
- Sub categories

The End!

Thank You For Watching!!!
